EDUCATION

University Of Ghardaia

B.S in Mathematics and Computer Science

Honours: Summa Cum Laude.

Ghardaia, Algeria

EXPERIENCE

Development Team Leader

Feb. 2023 – June 2026

Google Developer Groups

- Led a team of 8 developers to deliver 5+ community-driven tech projects and workshops.
- Mentored 10+ junior developers in **TypeScript** and **Git** workflows.
- Collaborated with 4 cross-functional teams to build 3 open-source projects using **React**, **Next.js**, **FastAPI**, and **Node.js**.
- Promoted best practices in code quality, **testing (Jest)**, and **CI/CD** pipelines with **GitHub Actions**, reducing failed deployments by 30%.

Software Engineer and Mentor

Jan. 2024 – Oct. 2024

Erenov

- Delivered comprehensive lessons to a class of **30 students** on web development, including **HTML**, **CSS**, **JavaScript**, and **PHP**.
- Designed a QR code scanning system in **Python** to streamline event check-ins and participant management.
- Successfully deployed a student registration system using **Docker** and **AWS**, streamlining enrollment and administrative data management.

PROJECTS

4 Player Checkers | Real-Time Multiplayer Web Game

- Deterministic Engine:** Designed a shared, deterministic **game engine** (rules, move validation, captures, and execution core) used by both client and server to guarantee consistent game state and prevent desyncs or cheating.
- Real-Time Networking:** Built robust server-side handlers via **websockets** for rooms, moves, chat, and sandboxed scenarios; implemented authoritative server state and client synchronisation for reliability under network variability.
- Developer Tooling & Debugging:** Created a sandbox and dev tools to simulate game flows, test edge cases, and reproduce lifecycle scenarios for faster debugging and **QA**.
- Reliability & Validation:** Implemented comprehensive validation and lifecycle logic (timeouts/forfeits, capture rules, perimeter/geometry checks) to enforce game integrity and edge-case handling.
- Deployment & DevOps:** Dockerized the application with a **Docker Compose** setup for reproducible local development and simplified deployment workflows.

Steam Shelf | Python-based Automation & Metadata Tool

- Algorithm Development:** Engineered a smart-matching algorithm to cross-reference local directory structures with remote metadata APIs for accurate game identification.
- Reverse Engineering:** Reverse-engineered Steam's VDF (Valve Data Format) structure to parse, modify, and write Steam library metadata, enabling **automated** management of non-Steam game entries.
- Automated Curation:** Orchestrated a **multi-threaded system** to autonomously fetch and map graphical assets to the steam client.
- Interface Design:** Architected both a **GUI (PyQt)** and a **CLI** to accommodate diverse user workflows.
- Software Distribution:** Successfully managed the end-to-end deployment of the tool as a standalone executable, ensuring **accessibility** for non-technical users.

Secret Message | MERN Full-Stack Application

- Security & Authentication:** Implemented a robust security layer utilising **JWT**, featuring **dual-token** authorisation logic.
- State Management & Optimisation:** Leveraged **React Query** for sophisticated data synchronisation, including background revalidation, **caching**, and **state persistence**.
- Full-Stack Development:** Architected a scalable, responsive app using **React** and **Node.js** with a focus on cross-platform performance.

TECHNICAL SKILLS

- Languages:** Python, TypeScript, Java
- Frameworks:** React, Next, Vue, Express, Tailwind, Three.js, Redux, Django, FastAPI, Selenium.
- Data Management:** PostgreSQL, SQLite, MongoDB, Redis.
- Tools:** Git, GitHub, Docker, AWS, Firebase.

OTHER SKILLS & INTERESTS

- Languages:** English, Arabic, French
- Interests:** Weightlifting, Video Games, Anime, Game Development; Twisty Puzzles.
